

CyTRAP Labs

CyTRAP Labs provides customised services to corporate and governmental organisations across a broad spectrum of risk and IT security matters, including:

re-engineering system architectures and/or business process management

reducing the number and severity of security incidents and policy violations, as well as reducing response times in case of malicious attacks

developing and administering effective in-house campaigns to raise awareness

implementing, managing and maintaining infrastructure to assure business continuity

CyTRAP Labs is your all-in-one provider for IT compliance, risk and security solutions.

We excel in creating customised defence grids for private and public sector organisations facing both daily small-scale issues, and random, large-scale attacks.

Our measures simplify security practices for all users, while

reducing risks,

assuring legal compliance,

optimizing off-shoring activities in the IT domain, and

reaping greater rewards from your risk, safety and security investments.

As a member of a worldwide network of computer security, legal compliance and governance experts, we provide in-depth and practical know-how, while maintaining complete vendor neutrality.
